1. Introduction to Web Development

1.1 What is Web Development?

Web development is the process of building websites and web applications that run in a browser. When you open a website like Google or YouTube, everything you see — the layout, colors, buttons, and text — was created by web developers. Think of it like building a house: HTML is the structure (walls, doors, windows), CSS is the decoration (paint, furniture, style), and JavaScript is the functionality (lights, electricity, moving parts).

1.2 Frontend vs Backend

Web development is split into two main areas:

2. Introduction to HTML

2.1 What is HTML?

HTML stands for Hypertext Markup Language. It is the standard language used to create the structure of web pages. HTML tells the browser what content to show — headings, paragraphs, images, links, and more. HTML uses tags to markup content. Tags are written inside angle brackets like `<tag>`. Most tags come in pairs: an opening tag and a closing tag.

2.2 Basic Structure of an HTML Document

Every HTML file follows the same basic structure. Here is the standard template. What each part means:

2.3 Common HTML Tags

Headings

HTML has 6 heading levels. `h1` is the largest and most important. `h6` is the smallest.

Paragraphs & Text Formatting

Use `<p>` for paragraphs, and these tags to style text inline:
